Additional Information for Terms of Use and Limitation of Liability

1. Terms of Use

This product is offered to you conditioned upon your acceptance without modification of the terms, conditions, notices contained herein. Usage of this product implies acceptance of all such terms, conditions, and notices.

2. Proper Use

This product is designed for use with dogs where training is desired. The specific temperament of your dog may not work with this product. We recommend that you not use this product if your dog is less than 8 pounds or if your dog is aggressive. If you are unsure whether this is appropriate for your dog, please consult your veterinarian, certified trainer or contact our customer support.

3. No Unlawful or Prohibited Use

This product is designed for use with dogs only. This dog training device is not intended to harm, injure, or provoke. Using this product in a way that is not intended could result in violation of Federal, State or local laws.

4. Limitation of Liability

In no event shall Aetertek be liable for any direct, indirect, punitive, incidental, special or consequential damages, or any damages whatsoever arising out of or connected with the use or misuse of this product. Buyer assumes all risks and liability from the use of this product.

5. Modification of Terms and Conditions

Aetertek reserves the right to change the terms, conditions, and notices under which this product is offered.

-04-

Quick Start

Step 1 Install the antenna onto the transmitter. Make sure the antenna is securely attached.

Step 2 Plug the charger into the DC hole of the master controller

Step 3: Screw the metal prongs onto the receiver till securely attached.

Step 4 Charge the receivers.

A RED LED light of the receiver is on during charging. When charging is over, the red LED light will be off with the BLUE LED light on. Full battery charge takes about 3 hours.

Tips: Recommend to charge the receiver upto 4 hours for the first 3 times .

Step 5: Sync the receiver and transmitter.

Unplug the charger, the red Led light is solid and receiver is waiting for sync ;

Note: if receiver had been turned off and still have power remained, press and hold on the On/Off button until the red Led light to be solid, then the receiver is waiting for sync.

As soon as the receiver pairs with the transmitter, the RED LED light turns off and BLUE LED light flashes every 10 seconds.

Quick Start

Step 6 Receiver self-exams

Short press the power button of the receiver by three times, the receiver will Beep , Vibrate and Shock by one time .

Step 7 Place the master controller

The master controller should be placed somewhere that will send the signals within the desirable zone

Start to train:

Put the collar into the receiver, wear the receiver around dog's neck, leave one finger place between the collar and the neck, then it's

-06- ready to train.

Step 8 Test the signals and mark the border to set the wireless fence

Step 9 Train your pet to understand the warnings and stay inside the control zone

After certain training by leash or remote control training system with beep/vibration/shock mode, your dog/cat will associate the signs(flags) with the the signals(beeps,vibration or shocks). They will learn to better stay away from the flags. Otherwise the unpleasant stimulous(vibration/shocks) will follow.

Very Important Note:

The signal maybe influenced by surroundings, weather or other wireless, so t he boundary should be observed and adjusted slitley now and then.

Transmitter Setting & Safe / Dangerous Zone

Take Level 5 for example:
 Within 25 diameter zone,
 dog is safe;
 outside 25 diameter
 boundary, dog is
 dangerous.

the current boundary
 is 25 diameter, you must set the
 whole system within 25 diameter,
 if dog is going to 26 diameter,
 whatever you set in transmitter,
 receiver will not response.

-07-

Transmitter Setting(Continue)

A Adjust the diameter range :

Press up or down button time by time, the diameter range will go a cycle from 00-10, at the same time, the approximate range both in feet and meter will be displayed along with the current diameter range.

-08-

Turn on & off Beep and vibration, Set Shocking Level:

Press down Mbutton by one time, the Sound Icon will flash, then press up or down button will turn on or turn off beep sound; then press down Mbutton once again to confirm the setting; or press Right button to save the setting and Vibration Icon will flash, in the same

method to turn on & off vibration;
To press Right button again to save the setting and Shocking Icon will flash, then press down Up or Down button, shocking levels will go a cycle from Manual 00 to 10 and auto mode.

Training Tips:

This product is intended to support behavioural training and is not designed to be used without necessary interaction. Always praise your dog for good behavior. Verbal commands combined with positive reinforcement will contribute to the success of your training and will achieve the fastest, most desirable results possible.

The recommended age for training is a minimum of 6 months, provided that dog has the attention span and capability to learn basic commands.

Work with your pet on one behavior at a time to avoid confusion and frustration. Use as little stimulus as possible and only to reinforce verbal commands when necessary. Do not over correct your dog.

Use verbal commands first, and supplement with a corrective stimulus only as needed. Be consistent with your verbal commands, using the same words every time.

Use the beeps as warning by pressing Ultrasound button. The dog will become conditioned to the beep preceding the corrective stimulus and will soon learn to recognize the beep as a warning along with your verbal command.

This system is not appropriate for correcting aggressive behavior. Please consult a professional trainer for advice.

-09-

Training Tips: (Continued)

Use the corrective stimulus along with your verbal command, to deter the dog from undesirable behavior by administering the stimulus DURING THE ACTUAL BEHAVIOR. Using this device as a punishment after the fact is not recommended and may serve to confuse and frustrate the animal.

Do not rely on this product solely to train your dog. If your dog shows signs of growling, snarling, biting or aggression while using the collar, discontinue use immediately and contact a professional trainer.

Some dogs will not respond to this product. Aetertek cannot guarantee the effectiveness of this or any trainer on your dog.

This product is not recommended for aggressive or elderly animals in poor health or animals otherwise unable to withstand the stimulus.

Caution: Any collar worn for extended periods can cause a condition similar to bedsores, know as Pressure Necrosis. To reduce the possibility, you must do the followings:

- Never leave the collar on dog for more than 12 hours per day.

- Examine the dog's neck daily for any signs of a rash or a sore.

- Supervise your dog during the first 2 days of training.

- Check the fit to prevent excessive pressure; you should be able to insert one finger between the collar strap and your dog's skin.

-10-

Safety

To maximize the effectiveness of the **AT-216F** remote training system, and safety of your dog, check the fit of the collar frequently and readjust the position of the electrodes on the animal's neck, checking for signs of irritation or discomfort.

If signs of skin irritation are noticed, immediately discontinue use and apply antibiotic ointment to help heal and soothe the area. If the condition persists beyond 48 hours, please seek the advice of a veterinarian. Such side effects are extremely rare and are generally caused by a more serious condition.

The collar is not intended to be left on a dog for extended period of time without supervision and doing so can lead to health problems. The conservative recommended time limit without supervision is 12 hours.

Wash the dog's neck area and the correction poles as often as needed to keep the area and poles clean. Make sure the straps are clean for best performance. The straps can be removed for cleaning but must be replaced in the same position.

Common Problems & Fixes:

The receiver does not seem to be working properly:

No beep, vibration or shock

- make sure the receiver is fully charged. Low charge will cause the receiver to work inconsistently.
- Following the instructions, match the receiver to the transmitter.
- Make sure the transmitter battery is good. A low battery will disallow the remote to emit a strong signal every time.
- Make sure the thumb knob on transmitter is NOT pointing at ZERO level.
- Make sure receiver is NOT turned off by transmitter. If receiver is turned off, transmitter will not be able to send out signal and the signal icon light will not flash accordingly.
- Make sure the dog you need to train is correctly selected. For example, if the 1st dog is currently selected, the 2nd dog will not react to any commands you send from transmitter. You can only control one dog at a time.
- Reprogram the receiver and intensity level and try again.

-12-

Common Problems & Fixes:(Continued)

The receiver does not seem to take a charge:

- Make sure the charger is plugged into the main supply tightly, as well as the charging end is plugged into the charging pole tightly. During charging, the red LED light on the receiver should stay on.

My dog does not respond when I issue a correction:

- Test the receiver according to the instructions above to make sure each stimulus is functioning.
- Make sure the correction prongs are positioned properly and that both prongs are making contact with the dog's skin and the collar is snug.
- Increase the intensity level of the correction.

Safety Guidance

- It is forbidden to open the shell in case of breakage of the machine or harm the waterproof feature. Otherwise it will violate warranty rules.
- In order to guarantee submersible feature, the waterproof rubber charging lid should be plugged in tightly.
- Only use the supplied adaptor to charge the receiver, otherwise the receiver will probably be damaged.
- Users are NOT suggested to touch the metal prongs on the receiver, otherwise it will harm human body in case of shocking operation. To test shock correction, please use the supplied test kit.
- if there is water in the charging hole, please dry it before charge the receiver.

Warranty, Terms & Conditions, Compliance:

Aertek, Inc., Warrants to the original retail purchaser that your Elite-Tek brand AT-216 Remote Training System will be free from defects in material and workmanship for a period of one year from the date of the original retail purchase. Provided that the damage is not caused by abnormal use or neglect. Warranty does not cover lost parts, cracked screen, physical damage or water damage. Warranty may include repair or exchange. After the expiration of the warranty, replacements and repairs are available for an additional charge.

-14-
